11- FUNCTION: BINDS SPECIFICALLY AND DIRECTLY TO SUBSTRATES CONTAINING FUNCTION: BINDS SPECIFICALLY AND DIRECTLY TO SUBSTRATES CONTAINING OF IMPORT SUBSTRATES TO THE NUCLEAR PORE COMPLEX (NPC). THE COMPLEX IS SUBSEQUENTLY TRANSLOCATED THROUGH THE PORE BY AN ENERGY REQUINING, RAN-DEPENDENT MECHANISM. AT THE NUCLEOPLASMIC SIDE OF THE NPC, THE THREE COMPONENTS SEPARATE AND IMPORTIN-ALPHA AND -BETA ARE RE-EXPORTED FROM THE NUCLEUS TO THE CYTOPLASM.

TYPE I MEMBRANE PROTEIN.

-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: MACROPHAGE-SPECICIC.
-!- SIMILARITY: CONTAINS 3 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAINS.
-!- CAUTION: IT IS UNCERTAIN WHETHER MET-1 OR MET-10 IS THE INITIATOR.

surface of a replicable display package, synthesising oligopeptides derived from the target protein on a solid phase, and testing for binding between the peptide and oligopeptides. The method is used to screen large peptide libraries, especially to detect antibodies, or their fragments, that bind to cell markers or that can differentiate between different that be compared to the control of the Synthetic oligopeptides W60537-61 are derived from the extracellular domain of CD64. They were synthesised on 25 polyethylene rods as adjacent, non-overlapping sets. Peptide specific phages were isolated affinity binding to the CD64-covered rods. The specification describe forms of the same protein, including bispecific antibodies that bind to two non-overlapping epitopes on the same monomeric antigen or two epitopes on different molecules. The genes/oligonucleotides that encode selected peptides can be isolated and used for recombinant production of antibodies. Selected antibodies are used, e.g. for immunohistochemical or method for the identification of a peptide able to bind specifically to target protein. The method comprises displaying the peptide on the Example 1; Page 29; 40pp; English. Sequence antibodies. Selected antibodies are used, e.g. immunofluorescent analysis, and also to detect mutation 12 A, (anti)oncogenes The specification describes cell transformation caused isolated by

Three-dimensional structures and models of Fc receptors, useful computer-assisted drug design $% \left\{ 1\right\} =\left\{ 1$

Claim 11; Page 316-317; 326pp; English

reduce IgG- or IgE-mediated tissue damage, e.g. IgG- or IgE-mediated hypersensitivity, recruitment of inflammatory cells or release of inflammatory modulators. The therapeutic compositions can also be used to treat disease in animals. The knowledge of the 3-D structure of FC-gamma RIa and models of other FCR provides a means for designing and producing compounds that regulate immune function and inflammation in an animal, including humans (i.e. structure based drug design). For example, chemical compounds can be designed to block binding of immunoglobulin to an FC recentor protein main. This invention describes a novel model of an Fc receptor (FCR) protein representing a three-dimensional (3-D) structure that substantially conforms to the specified atomic coordinates. Computer model images of an Fc receptor protein using various computer programs and models. The products of the invention have anti-inflammatory and immunoprotective activity. This sequence represents the human sFC-gammaRI protein oligonucleotides, peptides, peptidomimetics and small organic moleculous computer-assisted methods of drug design. Therapeutic compositions that inhibit the activity of FC-gammaR or FC-epsilonR can be used to the FcR can be used to design bioactive chemical fragment described in the method of the pn bioactive chemical compounds, e.g.
peptidomimetics and small organic molecules. ç

The extracellular portion contains six potential N-linked glycosylation sites and six Cys residues distributed among three C2 set Ig-related domains. A fusion protein of FCRI and a receptor ligand will be helpful to increase the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This amino acid sequence was predicted from the cDNA sequence of cDNA clone pl35. It differs from the sequence predicted from clones p98/X2 and p90 (see Q21179 and Q21180, respectively) at position 25, pl35 encodes a Ser residue and the other two clones predict a Thr residue. At position 58, pl35 predicts Leu and p90 predicts Val. Sequences predicted from all 3 clones show the predicts Val. Sequences predicted from all 3 clones show the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             domain, and a short, highly charged cytoplasmic domain. The extracellular portion contains six potential N-linked glycosylation sites and six Cys residues distributed among three C2 set Ig-related domains. A fusion protein of FCRI and a receptor ligand will be helpful to increase the potency of antibodies in therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and clone p90 predicts a Thr residue. At position 58, p90 predicts val while clones p135 and p98/X2 (see Q21179) both predict Leu. Sequences predicted from all 3 clones show the typical features of a type I integral membrane protein and include a short hydrophobic signal sequence, a single 21-residue hydrophobic membrane-spanning

The amino acid sequence (R91438) of human FCRI was detd. from a cDNA clone, p135 (T14717), obtd. from a cDNA library using an immunoselection cloning method. FCRI is a high affinity receptor for the Fc portion of IgG, normally located on cell surfaces of macrophages. Another isolated cDNA clone, p90 (T14719), coded for a variant (W00859) of the FCRI sequence, and a third clone, p96 (T14718), coded for an FCRI (R91439) having a different C-terminal sequence. A fusion protein of FCRI and a receptor ligand will be helpful in increasing the potency of antibodies in therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cloning of cDNA encoding cell surface antigen - useful of diagnostic and therapeutic proteins % \left( 1\right) =\left\{ 1\right\} =\left\{ 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note=                                                                                                                                                     transported to the cell surface membrane of a eukaryotic cell. It has been used to clone genes (see V63442-63) encoding cell surface antigens from mammalian lymphocytes (see W80440-55). The isolated genes can be expressed in a prokaryotic or eukaryotic host cells to produce the encoded protein. The invention also provides high efficiency expression vectors (see V63441 and V63444) which allow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note=

                                             This is the amino acid sequence of human Fc receptor I (FcRI), as deduced from cDNA clone p90 (see X07372) isolated using a rapid immunoselection cloning method from a cDNA library expressed in COS cells. The cDNA library was constructed from polyA RNA of cells
                                                                                                                                         New cloning vector and polylinker - based on existing sequences fefficient cloning and expression of mammalian cDNA(s), especially human lymphocyte antigenic sequences

The method is useful for the isolation and cloning of any protein which can be expressed and transported to the cell surface membrane of a eukaryotic cell. It has been used to clone genes (see V63442-63) encoding cell surface antigens from mammalian lymphocytes (see W80440-55). The isolated genes can be expressed in a prokaryotic or eukaryotic host cells to produce the encoded protein. The invention also provides high efficiency expression vectors (see V63441 and V63444) which allow the generation of very large mammalian expression libraries. The juminotherapeutic applications, including the diagnostic and immunotherapeutic applications, including the diagnostic and
